Table of Contents

Chapter Contents

Chapter 1 Introduction
Chapter 2 Input Parameters
Chapter 3 Nuclear and Atomic data
Chapter 4 Geometry and Zoning
Chapter 5 Binary Data File Formats
Chapter 6 Example Problems
Chapter 7 TARTCHEK
Chapter 8 Utility Codes
Chapter 9 Installation and Maintenance
Appendix 1: Tables
Appendix 2: Figures
References

Chapter 1 Introduction

Abstract 1
Dedication 1
Acknowledgments 1
Overview of this Report 3
Introduction 3
Constraints on the Design of TART95 6
Benchmark Results 7
Are Workstations Practical? 7
The History of the TART Family of Codes 9
What Code Should You Use? 13

Chapter 2 Input Parameters

Overview of Input Preparation 1
Step by Step Input Preparation 2
Minimum Required Input 4
Allowed Input Parameters 6
Input Lines and Statements 6
Input Fields 6
Keywords 7
Mandatory versus Optional Input Parameters 7
Comment Lines 7
Blank Lines 7
Continuation 7
Later Input Supersedes Earlier Input 8
TART95 Extensions 9
Recommended Options 9
From the Beginning to the End 10
Type of problem - Reactivity or Source 11
Geometry 12

Inside or Outside Surfaces 12
Preferred axis of orientation 15
Definition of Surfaces 16
Surface keywords, Number and Parameters 16
First Degree (Planar) Surfaces 16
Second Degree (Quadratic) Surfaces 17
Spheres 18
Direct Definition of Spheres 18
"Two Point" Spheres 18
Ellipsoids 20
Circular Cylinders 22
Circular Cones 23
Direct Definition of Circular Cones 23
"One Point" Circular Cones 25
"Two Point" Circular Cones 26
General Aligned Quadratic Surfaces 27
Translation and Rotation 29
Definition of Zones 30
Interior and Exterior Zones 31
Reflecting Zones 35
Material Definitions 38
Zonal Properties 40
Sources 45
Type of Particle 45
Energy Distribution 45
Neutron spectrum 45
Photon spectrum 45
Angular Distribution 54
Neutron Angular Distribution 54
Photon Angular Distribution 54
Time Distribution 57
Neutron Time distribution 57
Photon Time distribution 57
Spatial Distribution 58
Sentinels 72
Neutron and Photon Edit and Tally (Output) types 90
Default Tally and Output 90
Angular Distribution Tally and Output 91
Time Dependent Output 91
Response Functions 91
Problem Multipliers 92
Zone Multipliers 92
Cross Section and Reaction Output 93
Additional and Non-Standard Tally and Output 93
Additional Output 96
Changing Tally Bins 99
Monte Carlo Test Calculations 102
Collector Surfaces 104
TARTNP Keywords Not Currently used by TART95 107
TARTNP Keywords Not Allowed by TART95 108

Chapter 3 Nuclear and Atomic data

Introduction 1
Sources of Data 1
Use of Data by TART95 2
Expected Energy Deposition 3
Multi-Group vs. Multi-Band Cross Sections 4
Kinematics 13
Interpolation 13
Neutron Interactions 16
Elastic and Inelastic Level Scattering 16
Thermal Elastic Scattering 17
Multiple neutron emission 18
Correlated (n,2n) 19
The Cluster Model 20
Photon Interactions 21
Coherent Scattering 21
Incoherent Scattering 22
Pair Production 22
Photoelectric 22
Fluorescence 23
Neutron Induced Photon Production 26

Chapter 4 Geometry and Zoning

The First Step 1
Coordinates of Particles 2
Preferred axis of orientation 2
Zoning 3
Tracking and Terminating Histories 6
Using Interior Void Zones 7
Defining the Universe 8
Closing Your Geometry 8
Tracking in 3-D Geometry 9
What Zone is a Particle Currently located in - WHATZONE 10
Distance to Boundary Calculation - HOWFAR 11
Advancing into a new zone 17
Reflection from a Zone - REFLECT 18
Consistency between WHATZONE and HOWFAR 24
Optimization of Geometry routines 24
Optimizing Geometry Input Parameters 25

Chapter 5 Binary Data File Formats

Overview 1
Binary Data File Use 1
Data File addresses 2
Characters from Data Files 2
Data File Sizes 3
Data File Contents 3
TARTND and TARTPPD
Common Header Information 3
Neutron Interactions (TARTND) 6

Neutron Induced Photon Production (TARTPPD) 7
TARTND
Neutron Interaction Collision Types 7
1 = Anisotropic Elastic Scattering 7
2 = Absorption 7
3 = Inelastic scattering, Isotropic, in CM 8
4 = Inelastic scattering, Anisotropic, in CM 8
5 = Tabulated 8
6 = Anisotropic Wide Level and Tabular 8
7 = NOT USED 8
8 = Tabulated n,2n, Isotropic in Lab 8
9 = Tabular, Isotropic in Lab 9
10, 11 = NOT USED 9
12 = Cluster Model, Isotropic in CM 9
13, 14 = Energy and Angle Uncorrelated in Lab 9
15 = Tabulated n,2n, Anisotropic in Lab 10
16, 17, 18 = NOT USED 10
19 = Fission Spectra, Isotropic in Lab 10
20 , 21, 22, 23 = NOT USED 10
24 = Fission Spectra, Isotropic in Lab 10
TARTPPD
Neutron Induced Photon Production Collision Types 11
103 = Line Source, Isotropic in Lab 11
104 = Line Source, Anisotropic in Lab 11
109 = Tabulated Spectra, Isotropic in Lab 11
115 = Tabulated Spectra, Anisotropic in Lab 12
GAMDAT
Photon Interaction Data 12
NEWCROSS
Neutron Cross Section Self-Shielding Data 16

Chapter 6 Example Problems

Overview 1
Running TART95 Problems 1
Criticality Problems 2
TART95's Definition of Keff 2
Static vs. Dynamic Criticality Problems 3
Example Criticality Input Parameters 5
New TART95 Features 9
Static Criticality Calculations 15
Fast Critical Assemblies 15
Slow Critical Assemblies 21
Hexagonal Repeating Cells 24
Dynamic Criticality Calculations 33
Sensitivity of Criticality Results to the Initial Flux Guess 42
Source Problems 47
14.1 MeV Neutrons or Photons in Water 47
Water Phantom 65
Pulsed Spheres 72
Lead Shield 79
Firstwall 94
TARTCHEK Problems 102

Neutron Detector 103
Canned Fuel 104
Quartics/Torus 105

Chapter 7 TARTCHEK

Overview 1
The Best Way to Learn TARTCHEK 1
Example Results 1
Requirements 1
Input and Output 2
Pages of Options 2
What is Displayed 3
Using your mouse 4
When can you select options? 4
Hardcopy Prints 4
Page Options 6
Stop 6
Currently Defined Pages of Options 6
Page 1
Geometry 6
Controlling the View 6
Moving Around 3-D Space 7
Center 7
10 Zoom 8
2 Zoom 9
1/2 Zoom 9
Mouse Zoom 9
Show Start 10
Show All 10
Show Now 11
Zone/Matter 11
What Zone? 12
What Material? 13
Resolution
Overview 14
1/2 Resolution 15
2 Resolution 15
History
Overview 16
1/2 History 16
2 History 16
Geometry Checks
Overview 16
Holes 18
Overlap 18
Track 19
Re-Entry 20
2-D vs. 3-D Tests
Overview 21
Page 2
Surface 22
Eye Right 24

Eye Left 24
Eye Up 24
Eye Down 24
Show Surface 25
Transparent/All Solid 25
Page 3
Flux Edit 27
10 X Range Increase the range by a factor of 10 28
2 X Range Increase the range by a factor of 2 28
1/2 X Range Decrease the range by a factor of 2 28
1/10 X Range Decrease the range by a factor of 10 28
Comparing Multiple Results 29

Chapter 8 Utility Codes

Making the TART95 Binary Data Files 1
TARTND 1
TARTPPD 1
GAMDAT 1
NEWCROSS 1
Analyzing TART95 Output 1
CRITEDIT 1
FLUXEDIT 5
PULSED 5
TARTVIEW 6

Chapter 9 Installation and Maintenance

Overview 1
Types of Computers 1
CRAY 1
SUN 1
SGI 1
HP 1
MEIKO 1
DEC-ALPHA 1
IBM-RSIC 1
IBM-PC 1
Others 1
Availability 1
Easy Installation 3
Other Installation 3
Installing TART95 4
Installing TARTCHEK 4
Installing the Utility Codes 5
critedit 5
fluxedit 5
Creating Binary Data Files 5
tartnd 6
tartppd 6
gamdat 6
newcross 6
Other Considerations 6

User Feedback 7
FORTRAN Computer Dependence 7
Binary Data File Computer Dependence 9
Memory Requirements 9
Memory on Workstations 10
Memory on IBM-PC 10

Appendix 1: Tables

1: TART95 Neutron Evaluations
2: TART95 Photon Evaluations
3: TART95 175 Neutron Group Boundaries
4: TART95 Neutron Default 50 Tally Group Limits
5: TART95 176 Photon Energy Points
6: TART95 Photon Default 50 Tally Group Limits
7: Limits for Tally Types 7, 8, 9 and 10
8: Isotope Reaction Numbers

Appendix 2: Figures

1: Hexagon Cell, showing material in each zone
2: Hexagon Cell, showing zone overlap
3: Water Phantom, neutron deposition, no source angular spread
4: Water Phantom, neutron fluence, no source angular spread
5: Water Phantom, neutron deposition, source angular spread
6: Water Phantom, neutron fluence, source angular spread
7: Water Phantom, photon deposition, no source angular spread
8: Water Phantom, photon fluence, no source angular spread
9: Water Phantom, photon deposition, source angular spread
10: Water Phantom, photon fluence, source angular spread
11: Pulsed Sphere, showing zones
12: Pulsed Sphere, showing materials
13: Firstwall, showing reflecting zones
14: Firstwall, showing 36 cylindrical tubes
15: Firstwall, showing details of tubes
16: Neutron Detector, Initial three 2-D Slices
17: Neutron Detector, 2-D Track Results
18: Neutron Detector, Detail of 2-D Track Results
19: Neutron Detector, 2-D Re-Entry Results
20: Neutron Detector, Identifying Zones and Materials
21: Canned Fuel, Initial three 2-D Slices
22: Canned Fuel, Identifying Zones to Make Transparent
23: Canned Fuel, three 2-D Slices with Transparent Zones
24: Canned Fuel, 3-D view inside can
25: Canned Fuel, three 3-D views inside can
26: Torus #1, Initial three 2-D Slices

27: Torus #1, 3-D view
28: Torus #2, Initial three 2-D Slices
29: Torus #2, 3-D View
30: Hour Glass, example quartic
